

Site feasibility checklist for Coagulation Sub-study

- Routinely perform rotational thromboelastometry (ROTEM) or thromboelastography (TEG).
- Standard of care to perform ROTEM or TEG within 1 hour from clinically relevant thrombosis/embolism or bleeding event.
- Standard of care to perform ROTEM or TEG 6 hours prior to commencement of ECMO.
- Capacity to perform additional ROTEM assessment to record TRAPTEM AUC, A6 and MS parameters.
- Standard of care to monitor coagulation disorders and pro-thrombotic risks of participants not mechanically ventilated for 7 days post-ICU discharge.
